

AS80 AlliSport heater matrix fitting notes

- The complete heater box with fan will require removing from the vehicle and disassembling to access and remove the original matrix.
- The box is mostly riveted together so make sure you have the correct size drill and replacement rivets to hand
- As the updated matrix is slightly larger, the securing plates will require modifying
- The plates need to be opened up so they fit over the matrix tanks
You can see the original plates in the image top left
- The complete box can be reassembled and refitted to the vehicle
- We recommend a system flush before final filling with correct concentration of anti freeze
